

FUNCTIONS AND FEATURES

The Mishimoto carbon fiber intake system is made of aerospace-quality carbon Kevlar. The carbon intake systems will replace your OEM air intake system, providing substantial increases in horsepower and torque increases.

STEP 1

STEP 2

STEP 3

INSTALLATION

1. Insert plastic fastener through the fan mount holes
2. Puncture the center of foam protective pad with plastic fastener and slide through until adhesive side sticks to fan mounting holes
3. Slide plastic fastener through the radiator fins and install a second protective pad to the radiator with the adhesive facing out
4. Next slide the dampening spring onto the fastener with the large spring coil facing the radiator as shown
5. Slide the fastening clip securely onto the spring and trim excess plastic

PARTS LIST

1. 4 heavy duty plastic fasteners
2. 8 adhesive foam protective pads
3. 4 dampening springs
4. 4 fastener end connectors

SUGGESTED TESTING

Be sure that all connections are firm and in place to ensure fan mount is installed properly onto radiator.
